

Developing a Standardized Preceptor Training Checklist

Utilization of Standardized Preceptor Checklist to Provide and Guidance to Precepting SRNAs and Improve Overall Clinical Experience

Sunho Park BSN RN, Torr  Edge BSN RN, Amazing-Grace Ighedo BSN RN

Background/Problem

There is no standardized preceptor guidelines to effectively help precept students in an intense, fast-paced OR setting.

SRNA report high stress and anxiety stemming from clinical experiences.

Formal preceptor training can reduce stress, anxiety, depression, suicidal ideation, and improve communication between CRNA and SRNA.

Development & of the preceptor checklist

The checklist was developed with experienced CRNAs

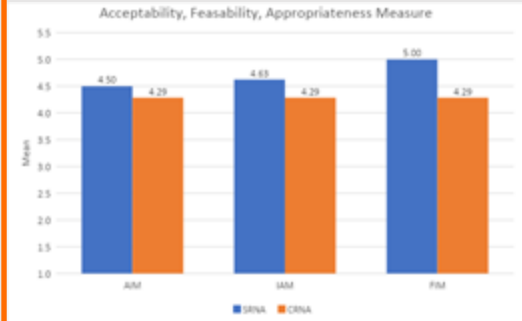

- Student Information
- Student Strengths, Weaknesses
- Student Understanding of Assigned Case(s)
- Daily Goals

27 CRNAs and 20 SRNAs used checklist for 2 weeks.

Setting: Virtua Our Lady of Lourdes

Acceptability, feasibility and appropriateness measure of the checklist

21.4% completed survey (2 SRNAs and 7 CRNAs), the score is based on 5-point Likert scale.

Overall received positive feedback from both SRNAs and CRNAs and revealed it is acceptable, feasible, and appropriate to use in clinical settings.
